Number 37

## Co-operation is Suggested to Help Gas Wells

Gas Inspector Suggests United Action to Improve Wells

Council met in regular session last Monday evening with Mayor Cox in the chair and councillors Brydie, Broughton and Sanderson present.

Mr. Benjamin informed Council that there were still a few blocks of graveling coming to the town and as it was impossible to get gravel at present owing to high water in the river he asked that he be allowed to furnish burnt shale instead. Council adjourned to inspect the shale and after returning decided same was not suitable for putting on the streets.

Mrs. Lawson made application for purchase of house in Lockwood. Council set a price of \$50.00 on building.

A bylaw setting a rate of \$15 tax for police dogs and \$20 for female police dogs was introduced but as there was not a full council the matter was left over till next meeting for consideration.

A request from the School Board for \$950.00 was approved. The monthly accounts as paid by the finances committee were approved for payment, on motion of Councillors Brydie and Broughton.

A report of the Redcliff Gas wells, from the Dominion Gas Inspector, was read. The report suggested that united co-operation be taken to improve the condition of the several wells in town.

A number of applications for taking advantage of the Consolidation Tax Agreement Act were read. These were approved on motion of councillors Brydie and Sanderson. Councillor Broughton was appointed deputy Mayor for the next three months.

The Secretary-treasurer asked for two week's holidays. Same was granted on motion of councillors Broughton and Brydie.

On motion of councillor Broughton and Sanderson the Secretary was instructed to adjust water rate on St. Ambrose paragon during the vacancy of the building.

The appointment of T. Fitzhenry as Pound keeper was approved and he was authorized to collect Pound fees.

## Burns, Allan Frolic In Comedy Cyclone

Showing at Monarch Theatre Today, Fri. and Sat.

They're at it again! George Burns and Gracie Allan, the nit wits of the networks, performing their giddy gyrations on the screen, prostrating the audience in the aisles and driving everyone crazy with their preposterous comedy situations. This time it's in "Many Happy Returns" with Guy Lombardo and his Royal Canadian playing the sweetest music this side of heaven (that's the title of one of the songs).

## Statement Presented at Stampede Meeting

Shows Small Deficit For This Year's Operations

A meeting of the Stampede Executive was held last week and for the purpose of receiving the financial statement for this year's operations at the annual Stampede held on Dominion Day. Although there was a fairly good attendance at the stampede this year the proceeds showed a small deficit.

Receipts from sale of tickets, entrance fees for races, bucking contests etc., the piano, and booth privileges amounted to \$597.25. Expenses for repairing grounds, securing of bucking horses, steers and calves, prize money, advertising, gate keepers and incidentals amounted to \$640.11. This means a deficit of \$42.86.

In previous year, the association built up a small surplus and despite the deficit this year it still has sufficient deposit in the bank to commence next year's operations. However it is the intention of the executive to make good this year's deficit by putting on something during the coming fall and winter.

This is a fairly good showing considering the fact that the association has received little or no financial assistance from outside sources nor has asked any one for prizes for the different events on the program.

## Here Comes The Groom At Monarch Theatre

"Here Comes The Groom" Sedgwick's newest picture, he produced for Charles R. Rogers, is a hilarious comedy in which Haley plays the central character. As a piccolo player who reformed to become a burglar, he eludes the police only to fall into the arms of a newlywed bride whose husband he deserts. Under threat of exposure he impersonates the husband.

## Redcliff Reminiscences

Taken From The Review File of July 16th, 1915

Prospects were never better than they are right now for a great big bumper crop.

Married men must have their wives' consent before making application to join the Colors.

Of the 95 men who left Maple Creek at the start of the war only six now survive.

Walter Armstrong received word today that Wm. Neale had been killed in action at Fest Bay on June 20th.

Theodore Roosevelt, ex-president of the United States, passed through Redcliff Wednesday on his way to Banff.

J. F. Bole, manager of the Saskatchewan Liquor Stores, says that the dispensaries are selling only 5% of the amount of liquor that was sold prior to July 1, when the bars were abolished.

## TELEPHONE SYSTEM

For some time past Redcliff has been served with the automatic telephone service. This change in the system has meant that all the business of the local central has been transferred to Medicine Hat and the expense of conducting a local central almost completely wiped out.

This being the case, it is only reasonable that telephone subscribers in Redcliff should derive some benefit from the big saving to the government through the wiping out of the expense of conducting a central office in this town.

Redcliff subscribers are now served exclusively from Medicine Hat. In reality Medicine Hat is our central office. Because of this it is only reasonable to expect that Redcliff telephone subscribers should have free connection with all telephones controlled by the Medicine Hat central office, since it is our central a-e-w.

At present the minimum cost to speak to Medicine Hat is ten cents.

This is a matter that should be taken up with the telephone department at once, either by the Council, the Ratepayers' Association or some other local organization.

## Ladies' Auxiliary Have Decoration Day

Was Held at the Cemetery Last Sunday Afternoon

Members of the Ladies' Auxiliary to the local Legion turned out in goodly numbers to the Decoration Day ceremony held at the cemetery last Sunday but there was a noticeable absence of officers and members from the Legion.

When the gathering assembled at the cemetery Rev. R. E. Fow conducted the ceremony and Rev. H. S. Hammett gave an address.

Graves of departed members of the Auxiliary were then decorated with flowers and wreaths.

Miss Irene Buchholz of Echo Dale S.D. is spending a few weeks holidays with her parents Mr. and Mrs. Carl Buchholz.

## JUST FOR FUN

As the income-tax bureau sees the U.S.A.: America, land of untold wealth.

In America there are two classes of travel—first class and with children.

He is a gentleman farmer—the only thing he raises is his hat.

A Pink Tea: Giggle—Gabble—Gobble—Gif.

Economy: A way of spending money without getting any fun out of it.

Diplomacy: Lying in state.

A child: Just a stomach entirely surrounded by curiosity.

Prejudice: Being down on something you're not up on.

## Mildred Walton's Body Recovered In River Sunday

Funeral Held From St. Ambrose Church on Monday

The body of Mildred Walton who was drowned in the river here last Wednesday, was found eight miles below Medicine Hat last Sunday afternoon. The body was found by two boys who were riding horseback near the Rae farm. It had gone down stream approximately 30 miles by river from the point of the accident.

The funeral took place from St. Ambrose Church here on Monday afternoon at three o'clock and the remains were interred in Redcliff cemetery. Rev. H. S. Hammett conducted the services.

The church was taxed to its capacity to accommodate the large attendance and many were forced to remain outside. Many High School pupils were present and members of St. Ambrose branch of the C.G.I.I. attended in a body.

Boys from High School acted as pall bearers. These were Jas. Brown, Eric and Elmer Congram, Oswald Sween, and Robert and Curtis Buchholz.

The fatality is one of the saddest we have been called upon to record for many years.

Mildred was a bright, cheerful, clever young girl of sixteen, in the full bloom of youth and with a most promising future. She had a most enviable school record, never having failed in any final examination, and at the time of her death was considered the brightest pupil in the local High School. During her past three years in High School she has never missed a day nor has she ever been late.

Besides her mother, deceased leaves two sisters, Joan and Dorothy and one brother, John Lawrence, to mourn the loss of a dutiful daughter and a kind and helpful sister.

Mr. and Mrs. W. H. Storrs, of Medicine Hat, uncle and aunt of deceased, were present at the funeral.

To her mother and family and her uncle, Wm. Nussey, the sympathy of the whole community goes out in their sad bereavement.

Miss Irene Buchholz was a tea hour hostess on Friday last.

Mrs. J. Stratton and family are at present occupying Dairy cottage at Elkwater Lake.

Miss Ena Sneddon, of Calgary who has been spending the past week with Miss Joyce Hodges, returned to her home on Tuesday.

Mrs. Fairbairn had as her guests on Friday last Mr. and Mrs. C. V. Gibson, Mrs. Tupper, the Misses Gibson and Tupper, and Messrs. King and McDonald, all of Medicine Hat with the exception of Mrs. and Miss Tupper who are guests of Mr. and Mrs. Gibson and are on their way to Alaska for a holiday.

## Softball Girls Win Game From New Club

Was One of Most Exciting Games of Season

One of the most exciting games of the season was played here last Monday evening when the local girls took the New Club into camp to the tune of 12 to 11, in a league fixture.

It was the first game played here under boys' rules and the change added considerably to the speeding up of the game.

The new rules call for nine innings but it took ten to decide the winners. It was a nip and tuck game from start to finish and was liberally interspersed with sensational plays.

The scoring was:  
New Club—11-4-0-0-0-0-11  
Redcliff—11-4-0-2-11-0-0-12  
Redcliff girls are still running neck and neck with Safeways for the top of the ladder. The standing now is:

| Team     | P  | W | L | Pct. |
|----------|----|---|---|------|
| Safeways | 8  | 7 | 2 | .875 |
| Redcliff | 10 | 8 | 2 | .800 |
| New Club | 10 | 4 | 6 | .400 |

## "Eskimo" Great Film of Arctic Daring

Thrills of Frozen Wastes in Remarkable Talkie

Mighty epic of the Arctic; a saga of love and passion that flamed in sub-zero temperatures; the greatest film record ever made of a native people who defy death in order to live—these are a few of the elements that distinguish "Eskimo," which shows at the Monarch next Thursday, Friday and Saturday July 19th, 20th, and 21st.

Not only has the grandeur of frozen wastes been captured for sight and hearing, but in addition the picture contains vivid human drama that is heart-stirring in appealing tenderness. Intimate scenes of Eskimos in their loves and hates provide a realism that could only be equalled by actual experience among people of the North.

Mr. and Mrs. J. Kitchen and George are holidaying at Banff.

Mr. and Mrs. G. H. Worts were visitors at Elkwater Lake last Sunday.

Redcliff Girl Softballers play the New Club in Medicine Hat to-night.

Inspector Harry S. Sweet of the Foremost Inspectorate has been transferred to the Medicine Hat Inspectorate to succeed the late Inspector F. S. Carr.

The bride was given in marriage by her mother who was also becomingly dressed in a yellow crepe ensemble with a white picture hat and accessories to match.

The bride carried a bouquet of red roses. The groom was attended by Harold Chapman, brother of the bride. The young couple are taking a short trip to Calgary. On their return they will make their home in Redcliff.

## Hon. R. G. Reid Is Now Premier of This Province

Adds Three New Men to Cabinet Sworn in Tuesday

As a result of the jury verdict in the charges against him, J. E. Brownlee immediately tendered his resignation as Premier of the province. A caucus of U. F. A. members of the legislature was at once called at which Hon. R. G. Reid was chosen as leader of the party and premier of the province.

Premier Reid's first duty was to select a cabinet which was sworn in Tuesday as follows: Premier and Provincial Secretary, Hon. R. G. Reid.

Minister of Public Works, Hon. J. MacLellan. Provincial Treasurer, Hon. J. Russell Love.

Minister of Lands and Mines and Municipal Affairs, Hon. Hugh W. Allan.

Minister of Health and Telephones, Hon. Geo. Hoadley. Minister of Agriculture, Hon. F. S. Grisdale.

Minister of Education, Hon. Perren Baker. Attorney General, Hon. J. F. Lymburn, K. C.

Minister without portfolio, Hon. Jene Parley.

In the new cabinet, O. L. McPherson, former minister of Public Works, is left out, and three new ministers have been taken in.

Owing to legislation passed some years ago, this change in the cabinet does not require any by-elections, and it appears the new government has no intention of going to the country at present.

## Redcliff Young Man Marries Hat Girl

Jacobson—Chapman

(Contributed)

A quiet but very pretty wedding was solemnized on Monday July 9th at the "Church at the Open Door," by the Rev. Mr. Gumm of Medicine Hat, when Miss Mildred Chapman, second daughter of Mrs. W. J. Chapman of Medicine Hat became the bride of Mr. Clark Jacobson son of Mr. and Mrs. John Jacobson of Redcliff.

The bride was becomingly gowned in a pink ensemble with wide picture hat and accessories to match. She was attended by her sister who was dressed in a blue ensemble with matching accessories.

The bride was given in marriage by her mother who was also becomingly dressed in a yellow crepe ensemble with a white picture hat and accessories to match.

The bride carried a bouquet of red roses. The groom was attended by Harold Chapman, brother of the bride.

The young couple are taking a short trip to Calgary. On their return they will make their home in Redcliff.

## Finest Quality Reasonably Priced

"Fresh from the Gardens"

## De-Bunking Mysteries

One of the traits which keeps humanity young and adds zest to the mere act of living, is man's capacity for wonder, his somewhat naive curiosity in fables, and his enthusiasm for the unusual or phenomenal in nature. It can scarcely be called a characteristic distinguishing homo sapiens from the beasts of the field or the domestic cat or dog (to mention species coming within the range of everyone's experience) shows a strangely similar capacity when confronted with something strange in its immediate environment. By test of paw or teeth, it ascertains whether the new experience is good or bad; just as man will, by more complicated experiments it is true, attempt to pierce the mysterious of its mystery.

There is a reason, of course, for this. Strange, every aquatic monster has been sighted in diverse corners of the globe. Reports concerning them have been considered of sufficient interest to warrant publication all over the world. A British Columbia lake provided the first thrill of the present series—a thrill which became familiar in everyone's mouth under the euphemistic title "Oggopogo". The ocean, not to be outdone by a mere inland lake, immediately produced another of these strange denizens of remote waters, which, christened "Cachobourou" to fit the crest of its habitat in Vancouver Island, quickly acquired a popular name. As "Cady" it attracted as much attention from reporters and the general public, during its brief occupancy of the spotlight, as have the Quebec quietude or recent and instigating hemo sapiens.

France next came to bat with a claim on behalf of its particular pet, seen as through a glass darkly, and acclaimed a monster, a freak, a hantu nature, or a throwback. The world was agog with speculation as to what manner of things these visions created were.

The sea serpent of myth and anecdote never attained such repute as the new genera. The sea serpent was too easily explained. It was either a snake which had strayed from its forest lair to essay adventure on the briny deep, or it was the gaudy and twisted trunk of a fair sized sapling which ocean currents induced with similitude of life.

This was less easily explained. Its discoverer, whether in British Columbia, France, Scotland, Brazil, or elsewhere—all stressed the "Oggopogo", "Cady" or what-have-you, was different! Scientists were interviewed by representatives of the popular press and, in unguarded moments suggested it was a relic of pre-historic times buried across the ages, in some leopoldine way, late A.D. 1883 or 34.

It is to be regretted that Scotland should have been visited by one of these unknowns. The hard-headed Scot, on occasions such as the anniversary of Burns, may indeed be prone to vain imaginings and uncanny visions, but in his normal state, he is, essentially, "from Missouri". Loch Lomond, which has induced many poems, caught the fashion. It produced a freak seen from its "bonny banks". But, when Loch Ness sought to uphold the dignity of salt-water—that was too much for the practical race north of the Tweed. It (the Loch Ness monster) was photographed—and strange, indeed, it looked! "A scientist subjected the picture to piercing scrutiny—and the result, attesting his opinion, was the photograph of the fluke of a killer-whale, too modern an animal, forthwith, to be acclaimed in competition with the million year throwbacks which imagination had created.

Until another wave of freak discoveries hit the pages of our newspapers, then, we must content ourselves with Aley Oop's disclaimer as a constant reminder of things that were before man was endowed with his amazing capacity to wonder.

## Air Base For Bermuda

Regular Service Planned Between  
Quarantined Islands And  
Mainland

Bermuda is going right ahead with its provisions to establish an air base. Legislation has been prepared to assist Imperial Airways to establish a regular service between these islands and the mainland.

The two islands, Barbados and Antigua, part of Warwick Parish "vested in her late Majesty Queen Victoria, her heirs and successors forever for quarantine purposes" have been appropriated as landing bases.

The government would contribute \$15,000 for construction and equipment of the port, according to the bill before parliament.

A maximum of \$4,000 would be paid to Imperial Airways each year for upkeep of the flying service. The same would be paid to the company either alone or in conjunction with another company or organization giving service by aircraft between these islands of the North American continent.

All plant supplies and equipment used in constructing the air base, admitted free by the government. The provisions would remain in force until December, 1946, the bill provides.

Light rays, X-rays, heat rays and wireless rays all travel at the same speed but vary in length.

Diarrhoea, Dysentery, Colic  
Cramps and Stomach Pains

Prompt treatment with Dr. Fowler's Extract of Wild Strawberry in such cases relieves the pain, checks the looseness of the bowels, and thus keeps away the suffering, the weakness, and often the danger of colic, accompanied with attacks of this kind.

It does this by checking the too frequent and irregular action of the bowels, and thus keeps away the weakness, thus making it a remedy for the treatment of bowel complaints of both young and old.

It is on the market for 50 years—you do not expect when you use it.

Put up only by The T. Milburn Co. Ltd., Toronto, Ont.

## X-Ray Motion Pictures

Newly Perfected Camera Shows  
Houses In Process Of Being  
Broken Down

Broken houses are now shown in the process of knitting by x-ray motion pictures which are made by a new camera, perfected by Doctor Arthur C. Pillsbury, naturalist and photographer of the University of California. Doctor Pillsbury's camera works on the same principle as the one used to photograph the unfolding of flowers, taking a series of single pictures at intervals, of movement imperceptible to the human eye, and then running them off as motion pictures to show developments which may have taken several moments. The first motion picture made with the x-ray camera showed the growth in the interior of a rose. It took seventy-two hours to film, as only one picture at a time could be made in intermittent exposures, to avoid damaging the rose during the filming. Doctor William D. Coolidge, inventor of the Coolidge tube, designed a special x-ray tube.

LETTER FROM A  
MAN OF 90

## About His Rheumatism

He asks us to excuse his writing. We do not mind it, and we can tolerate him on being able to write at all at his age, especially as he writes this writing, at 91, and is still sufficient.

This is what he says in his letter—  
"Three years ago I was laid up for six weeks with inflammatory rheumatism. Since that time I have been taking Dr. Williams' Pink Pills and another tablet. My hands have still been stiff, but I have been able to write every morning before breakfast, and small columns of news, because I am sure it has kept me in good shape for three years. Because this writing and use both hands to write."

Kruschen dissolves away those needle-pointed crystals of uric acid which are the cause of the rheumatism. It will also flush these dissolved crystals clean out of the system. Then if you keep up the "little daily dose", excess uric acid will never form again.

Kruschen dissolves away those needle-pointed crystals of uric acid which are the cause of the rheumatism. It will also flush these dissolved crystals clean out of the system. Then if you keep up the "little daily dose", excess uric acid will never form again.

## Postal Rocket Tested

Will Speed Delivery Between Britain  
France And Ireland

The world's first postal rocket has been tested out near London by the postal authorities and judged successful.

The rocket secretly veiled the experiment with the rocket which, invented by Gerhard Zucker, German expert, was said to be the forerunner of the rocket. It was calculated to give Great Britain one-minute postal contact with France and three-minute contact with Ireland.

The rocket will carry 1,000 letters, bearing special stamps, it was learned. It will be trained on Chislehurst, and will be launched from the rocket, and the letters will be posted at the nearest postal point to where the rocket falls.

The speed of the rocket is estimated at 20 miles a minute.

## Queer Thing About Pies

H.C. People Pay As Much For  
Apples As Londoners

It costs just as much to buy an apple in London or in the Canadian desert as it does in some parts of British Columbia. This is another of those "Believe It or Not" statements but it may be believed because it is absolutely true and the mischief of the situation is that there is no immediate method of remedying it. It does seem absurd that while apples are grown by the millions in one section of this province and thrown away as another section just a few hundred miles distant, is concerned, these apples might as well be grown in the canal river face of Mars—Country Life in B.C.

## Experimented Two Years

Watchmaker Drilled Hole Through  
Pin From End To End

Henry Hux, watchmaker for the past 25 years in Montreal, Ontario, has succeeded in drilling a hole through a common pin from end to end without breaking it. Hux has been experimenting for the past two years, and the hole made with a fine drill is just large enough to thread a hair out of a mouse's head through it. The pin was put on display in his window and caused a great deal of interest. It is believed that this is the second time this has been accomplished in Canada, a watchmaker in Toronto having succeeded in doing it.

The supply of goosey news never to equal the demand.

W. N. U. 2082

Dr. Wernet's Powder For  
FALSE TEETH

A Joy To All Users  
Cry 'Slip or Slide'

Appliable on Dr. Wernet's Powder and your won't have to think about your false teeth all the time. It will keep them in place for years. But anything you can do to keep them in place is a good thing. It is a positive can't slip or slide. False teeth are a nuisance when they slip. Leans on cold, gummy substances—no healthy material, breath unpleasantly by world's most noted dentist. The cost is small—the comfort great. Any drugist.

## Means Trip Progress

Streamline Train Promises Railroads  
New Lease Of Life

M. E. Tracy in an article in the New York World-Telegram, says carrying eighty-five passengers together with baggage and express 1,000 miles in thirteen hours and on 317 worth of fuel is something new. It promises the railroads a new lease of life, capital new enterprise and labor work. Best of all, it promises the traveling public more for its money.

We have needed something of the sort for five years. With all the experimenting little has occurred to thrill people. By and large they have been slow to fall back on the hope that the best which could be done was to rearrange what they had on hand.

Progress, which should be considered as synonymous with prosperity, is not made of that kind of rearranging.

We are not going to find better living conditions, much less happiness, by doing what we have always done in a different way. That is where political remedies fail.

Progress is a matter of invention and achievement.

Take this streamline train, for instance, and what does it imply? It implies the scrapping of billions in rolling stock, the substitution of crude oil for coal, the abandonment of steam locomotives for diesel engines, a great consumption of aluminum and a reduced consumption of steel, different operating and mechanical methods, the mobilization and training of new crews and a multitude of other drastic readjustments.

## Centaphil Dedicated

Canadian Legion Holds Impressive  
Service At Portland, Oregon

Flag representative of the United States, Great Britain, and Canada, fluttering from a single flagpole, symbolized peace in the permanent English speaking nations at a memorial service of the British Columbia command of the Canadian Legion. This service was the high point of the day's Regatta program at Portland, Oregon.

To those of both Canada and the United States who died in the World War we dedicated the permanent centaphil, from which the flagpole sprang.

"This is a gesture of international friendship," said Brig. Gen. Alex. Ross, president of the Legion. "It is perhaps unique because this is the first time a nation has dedicated a memorial to both the dead of a neighboring nation and its own dead."

A troop of Royal Canadian Mounted Police drew great applause when they marched on foot in the Canadian legion parade. Killed baggage bands, drum corps and legionnaires, paraded with uniforms and color of two nations.

The first pumpkin pies were made by cutting a hole in the pumpkin, excising the seeds and throwing away the pulp, leaving the cavity with apples, sugar and milk, and then baking the whole.

"I don't know what to make of the lettuce in my garden," says a correspondent. He had better consult a salad recipe book.

United States, Brazil and Mexico are three most populous nations in the western hemisphere.

Heat of stars is measured by a device weighing only one one-thousandth as much as a drop of water.

MATURITY—MATERNITY  
MIDDLE AGE

At these critical periods a woman needs a medicine she can depend on. That's why so many take Dr. Lydia E. Pinkham's Vegetable Compound. 28 out of 100 say "It helps me!" See leaflet, too.

LYDIA E. PINKHAM'S  
VEGETABLE COMPOUND

Seeking Formula To  
Control Wheat Exports

Young Alberta Man Playing Alchemist  
Let For Wheat Growers

Like an alchemist of old seeking a formula for transmuting base metal into gold, a young resident of Calgary, Alberta, is now seeking a formula in a modern setting, searching for a formula which will effectively control wheat exports and establish a minimum world wheat price system.

Andrew Cairns, product of an Alberta farm, University of Alberta graduate, Al wheat pool statistician in turn, has won distinction unique as chairman of an international wheat commission created to better the lot of farmers of five nations.

Through his interpretation of complex wheat production problems "Andy" has won appreciation and praise from United States and European co-workers. Quiet-spoken, deliberate in his thinking, this 35-year-old student from the Canadian prairies understands the language of the wheat rancher and has found his niche in directing the distribution of a world wheat supply under the London wheat agreement.

We have for organization has brought him a personal power where world wheat prices are discussed. At Rome and at London he has matched wits with the shrewdest wheat traders of four continents. Through his devotion to an ideal, a world-wide wheat price system has been formulated in his mind moulded into an economic entity.

He is the possessor of a doctor's degree from the University of Minnesota but it was under the watchful eye of Dr. F. J. Birchard, in the research laboratory of the board of wheat commissioners, that he was trained on his start with the Alberta wheat pool.

## Australian Post Honored

Best Placed In Poet's Corner Of  
Westminster Abbey

Adam Lindsay Gordon, national poet of Australia, who has been honored by his best being placed in the Poet's Corner of Westminster Abbey, is the first British Dominion poet to be so commemorated, and the first poet so honored since Tennyson, before his last stanza.

A memorial volume by Mayor Douglas Stadden, on whose petition the monument has been erected, has been published, giving the story of Gordon's eventful life, his one love affair, and his tragic death.

He died by his own hand in 1870. Burdened with debts, and depressed by the news that he had lost the use of his legs, he had attempted to end his life in the city of London (as he had of the Gordons of Llandis in Aberdeenshire) he went out into the scrub and shot himself.

When he had been published in his last book of poems, "Bush Ballads and Galloping Rhymes."

## An Unusual Hobby

Englehart Has Wonderful Collection  
Of Match-Box Tops

A sephor of Lord Kitchener of Khartoum, Major Pat A'Beckett, of Te Old Plough Inn, Ipswich, a Buckinghamshire village, owns the largest collection of match-box tops in the world. He has 22,000 different tops, and they cover every available inch of space on all the walls in three rooms at his home. He has been collecting them for many years, and has travelled almost the world over in search of new designs. He has some of the first match-boxes which came into use, and a history of world progress can be traced in the colorful designs on the match-box covers which form a unique wallpaper at his country inn. A few years ago, ex-King Alfonso, who is also an enthusiastic match-box top collector, paid a visit to Major A'Beckett and spent several hours inspecting his display. But ex-King Alfonso's collection was limited to a mere three thousand!

The average cost of producing hay on the Dominion Experimental Farm in the Prairie Provinces has been \$5.99 per acre, or 6.23 per ton for a yield of 1.44 tons per acre. Considerable variation in cost has occurred on different experimental farms, the cost per acre having ranged from \$2.95 at Swift Current to \$10.45 at Morden, while the cost per ton has varied from \$4.47 at Brandon to \$5.43 at Indian Head.

At a public dinner in London the chairman hoped that "the victors will carry away with them some interesting souvenirs of their presence this evening."

## British Museum Buys Records

Bible Contains Birth Of First Child  
Seen At Tristan Da Cunha

Bible records of the birth of the first children at Tristan Da Cunha, the lonely little British island of volcanic origin in the south Atlantic, 2,000 miles west of the Cape of Good Hope, have just been purchased by the trustees of the British Museum.

This Bible, which is an American one, dated 1831, was in the family of William Gains, the English founder of the Tristan settlement. It now faded ink it records Gains' marriage and the birth of 16 children, from whom many of the 700 islanders today are descended. The latest owner was Mrs. Anne Gains, a granddaughter of William Gains.

A gust of wind at 81 miles an hour, registered at Croydon in 1929, blew the highest wind velocity ever noted in or near London.

COLIC PAINS  
ended!

"If my baby has colic, I know I can get it cured. I've tried everything else, but I've found that Dr. Williams' Pink Pills for Infants is the only thing that will cure it. I've tried everything else, but I've found that Dr. Williams' Pink Pills for Infants is the only thing that will cure it. I've tried everything else, but I've found that Dr. Williams' Pink Pills for Infants is the only thing that will cure it."

## Dr. Williams' PINK PILLS FOR INFANTS

Why Midwife Do Not Grow  
Why is a midwife a midwife?

Scientists and medical men who have puzzled over this baffling question for years will have an opportunity to pursue their investigation to a fuller extent at the Chicago World's Fair this summer.

Nate T. Eagle, managing director of the new midwife city at the fair, has extended an invitation to scientists to use the colony of little people as a "clinic" to study the perplexing problem of why the midwife never grew up.

The midwife city will occupy the same location as it did last year but will be four times as large. It will be populated by the largest gathering of midwives of both sexes and all ages and congregated in one place.

Although a midwife city is believed to be due chiefly to glandular disorders, no one has ever answered the question logically and scientifically.

## To Explore Elasmere Island

Oxford University Expedition Is  
Leaving England In July

Edward Shackleton, son of the late Sir Ernest Shackleton, famous Antarctic explorer, is organizing what will be known as the Oxford University Elasmere Island expedition, which is to leave England in July aboard a chartered Norwegian steamer.

The expedition is receiving the practical support of the Canadian government and the Royal Geographical Society.

Exploration and geographical survey of some of the hitherto completely unknown interior of Elasmere Island, about 600 miles off Canada's Arctic coast, is the object of the expedition, which will be led by Dr. Noel Humphreys.

OFF COLOUR?

WORLD HAPPENINGS  
BRIEFLY TOLD

Fifty additional constables have been engaged on the Northern Ireland border to cope with cattle smuggling from the Irish Free State.

The Prince of Wales has accepted the presidency of the English-speaking Union of the British Empire, it was announced in London.

Twelve new warships are to be built for the Polish navy, it was reported at Warsaw. They will be four mine sweepers, two destroyers and six submarines.

What is probably the world's largest modern lake has just been made at Sheffield for the English Steel Company to admit forging up to 60 feet in length and 80 inches in diameter.

Once again, the fact that Britain has no intention of handing over Bermuda or any other territory in payment of the war debt to the United States was stated in parliament.

A court-martial found Augustine Waldman, former premier of Lithuania, guilty of an attempt to overthrow the existing government, June 7. It condemned him to 12 years at hard labor.

Without fuss or ceremony, the bridge across the second narrows of Burrard inlet, connecting Vancouver with the north shore at Point du Lac, at the eastern end of Lake Athabasca, according to postal officials at Edmonton.

The birth rate in England and Wales was higher during the first four months of this year than in the same period last year, according to vital statistics made public recently. An increase of 900 births was recorded.

Report of silver bullion in May more than doubled that of the corresponding month last year, while a substantial increase was shown in the value of gold bullion exported, the Dominion bureau of statistics says in a report.

## Four Trips Each Year

Air Mail Service For Pond du Lac Post Office

Between 8,000 and 10,000 letters per mail collectors were carried on the inaugural flight June 15 between Fort Chipewyan and the new post office being opened at Pond du Lac, at the eastern end of Lake Athabasca, according to postal officials at Edmonton.

Information from Ottawa shows that the Canadian Airways, Ltd., which has the mail contract, will make four trips a year between the two offices.

## Establish Farm Schools

Prince Of Wales Donates Sum For Child Emigration's Society Plan

The Prince of Wales has donated \$5,000 to the Child Emigration Society's scheme for establishment of farm schools in the Dominion for children from Great Britain, including a farm school in British Columbia.

With the support of the prince the society launched a campaign for \$200,000 to develop the scheme, which has proved very successful in Western Alberta. Children remain at the farm schools five or six years.

It is estimated that 25,000,000 persons live in the 135,700 square miles of the Punjab region of India.

## OGDEN'S "Cigs well that Smokes Well"

## Youngest On Bicycle Team

Sergeant Don Breerton Is Member Of Winnipeg Rifles

Sgt. Don Breerton, 16 years of age, representative of Manitoba on the Canadian Bicycle team, is only 19 years of age and one of the youngest shots ever to win the honor of shooting for Canada against picked marksmen from South Africa, India, Ceylon, Australia and other parts of the empire. He is a member of the Winnipeg Rifles (Little Black Devils).

Sgt. Breerton began his rifle practice at the age of 12 under the tutelage of Lt.-instructor T. Rutherford with the Winnipeg Cameron Highlanders. In that year he won the coveted grand aggregate and has placed among Manitoba's outstanding riflemen in the Dominion shoot at Comnaught ranges, Ottawa, four times since.

Only two other Westerners have been picked with Breerton for the squad of 18 shooters to represent Canada. They are Lieut. S. Johnson, Wayne, Alta., and Sgt. K. Liddell, Calgary.

Another invention in connection with airplanes is being talked of in Europe. It is stated that this promise to be the most revolutionary development in air transport since the first aeroplane was built and is foreboded by a German inventor who has just patented a steam-driven flyer which he claims will fly at 270 miles an hour for sixty hours or more non-stop.

This statement claims that no ordinary aeroplane could attain Schneider trophy speeds; and that an airplane could fly from Europe to the Far East, or South Africa, in three days without coming to rest for fuel.

Crossing the Atlantic to North or South America would be a short and easy journey.

The inventor is named Huettner and he is managing engineer of the biggest post station in Berlin, a man whose reputation would not allow him to make wild claims. His revolutionary new engine is a steam turbine, of the type used in ships, and he has succeeded in making it so light that it is no heavier in proportion to horsepower than the present petrol car engines. Moreover, there is no risk of fire and explosion, which now costs so many airlines' lives—Brandon Sun.

## Drills Pin Two Ways

Watchmaker In Woodstock Goes Measford Jeweler One Better

Reading of the feat of a Measford, Ontario, Jeweler who after twenty-five years of endeavor had succeeded in drilling an ordinary pin end to end, Fred Wilkins, a Woodstock watchmaker, felt called on to accept the challenge. Within three-quarters of an hour he had drilled the pin through end to end, then cross-drilled it near the point, and completed it. Claiming the stunt as a feat of patience rather than of skill, Mr. Wilkins stated that he had accomplished it once before in competition in Toronto a number of years ago, but at that time had "blistered" the end of the pin on one previous attempt.

It is likely that the woman who dances on a spidly heeled shoe is really resting. The Western Ontario Osteopathic Society was told. "When a woman puts on high-heeled slippers and goes out to dance she is giving her feet a beneficial rest," said Dr. H. R. Clough, of Colborne. "The change to high-heeled slippers changes the muscular pull of all the muscles and gives the feet a rest."

## Government Annuities

Report Shows The Government Makes A Profit On This Fund

The Dominion government in the fiscal year 1933-34 received \$7,972,000 in annuities payments and paid out \$2,500,000 to beneficiaries, the senate special committee on public accounts was told by H. G. Blackadar, superintendent of annuities, department of labor.

The total amount received since 1908—the 30 years government annuities have been in effect—was \$43,413,000. Payments in the same period totalled \$13,565,000. The annuities fund has a credit of \$35,000,000 with the finance department, Mr. Blackadar informed the committee.

Annuities are sold by the government particularly with a view to assisting the person with small incomes to save.

There was a profit to the government on the annuities fund, Mr. Blackadar stated. The average increase charge allowed the fund was 4.42 per cent.

The average interest charge on government obligations outstanding last year was 4.42 per cent, the government, however, absorbs administration costs of the fund.

"This fund more than pays its way," Senator W. A. Giesbrecht (Edmonton) asked. "It was widely believed the annuities fund was a burden on the country."

## Newest In Air Transport

German Inventor Has Patent For Steam-Driven "Plane"

Another invention in connection with airplanes is being talked of in Europe. It is stated that this promise to be the most revolutionary development in air transport since the first aeroplane was built and is foreboded by a German inventor who has just patented a steam-driven flyer which he claims will fly at 270 miles an hour for sixty hours or more non-stop.

This statement claims that no ordinary aeroplane could attain Schneider trophy speeds; and that an airplane could fly from Europe to the Far East, or South Africa, in three days without coming to rest for fuel.

## Recipes For This Week

(By Betty Barclay)

## MINCE MEAT MOLLASSES COOKIES

9 ounce package dry condensed mince meat

1/2 cup water

1/2 cup butter

1/2 cup brown sugar

1 egg

1 cup molasses

3 cups flour

1 teaspoon salt

1/2 teaspoon ginger

Boil dry condensed mince meat and 1/2 cup of water for 3 minutes or until mixture is thick and sticky.

Add butter and sugar together. Add beaten egg and molasses. Mix and sift flour, salt and ginger. Add dry ingredients to batter mixture gradually. Fold in cooled mince meat. Drop by spoonful on buttered cookie sheet and bake 10 minutes, or until brown in a moderately hot oven (375 degrees F.). This recipe makes 45 dozen cookies.

## SPRING SALAD

1 package lemon or lime-flavored gelatin

1 pint warm water

1 tablespoon vinegar

1 cup nut meat, chopped

2 cups cucumber, diced, salted and drained

1 cup celery, diced

Dissolve gelatin in warm water. Add vinegar. Chill. When slightly firm, add nut meat and cucumber. Turn into mold. Chill until firm. Turn out on crisp lettuce. Serve with mayonnaise. Serves 8.

## Little Journeys In Science

ANESTHETICS

(By Gordon H. Quest, M.A.)

Acclaimed as "God's greatest mercy brought by man to man", ether was first used in surgical operations nearly 18 years ago. The first demonstration took place in the Massachusetts General hospital at Boston on October 16, 1846, when William T. G. Morton, a young Boston dentist, demonstrated that this anesthetic could be used successfully in the performing of operations.

Although Dr. Morton is credited with giving the first demonstration of the use of this anesthetic before a group of medical men it is understood that a Dr. C. W. Long, of Jefferson, Georgia, had previously used it to some extent in his practice. Following Dr. Morton's demonstration, the use of ether was quickly adopted by medical men on this continent and abroad.

This new development brought about a great revolution in surgery and did away with the gruesome scenes which had for so long associated with operations during which the patient did not lose consciousness.

In 1844 Humphrey Davy, the English scientist, knew throughout the world for his invention of the Davy Safety Lamp, used by miners, did not know of nitrous oxide, better known as laughing gas. This gas proved to be a satisfactory general anesthetic and is widely used for this purpose.

With the discovery of ether and laughing gas, scientists became interested in this new field and it was not long before chloroform was produced. Dr. James G. Simpson and Thomas Mummy being outstanding in this work.

Ethylene is another anesthetic which was introduced in later years, and which was found to have many advantages for surgical work. Acetylene is also used as an anesthetic, but is not as common as the others.

In addition to the value of anesthetics in relieving suffering during operations, they have been found to be of great benefit in making it possible for scientists to study various diseases and to find cures for them.

Animals studied under the influence of anesthetics have been the objects of many researches which have brought about great benefits to the race.

## New Super-Canader

Surprising Details Of Vessel Now Being Built In Clydebank

Shipyard

The enormous size of the funnels to be placed on the new super-Canader, now designated as the 354 in the Clydebank shipyard, Glasgow, may be visualized when compared with the various tubes and funnels in operation in New York City. The giant liner's stacks will be in the neighborhood of 100 feet in circumference. The diameter of the funnels is approximately 30 feet. That will be greater than any of the following—Holland Tube, 28 feet 6 inches; Pennsylvania R.R. Tubes, 23 feet; East River Tubes, 23 feet; New York Central Tunnel, 25 feet; Harlem Tunnel, 15 feet, 9 inches; 6000 Street Tunnel, 18 feet.

The forward funnel will be more than 70 feet in height from the keel, the two other funnels decreasing in height. From the keel to the top of the funnels the vessel will be approximately 180 feet, equivalent in height to a building of 15 stories.

The design of the funnels will be reached after many demonstrations in a specially constructed test tunnel. More than 30 model funnels will be used in the design.

A highly important job is taking place in the shipyard in connection with the testing of the funnels, and over 400 men are working on the funnels. Constructed at Darrington, this model is nearly 140 feet in diameter and by far the largest ever made. It is placed in the shipyard at Clydebank where expert workmen are engaged in assembling the various components. When this job is completed and tests carried out to ensure that every detail in the fitting is perfect, the rudder will be dismantled and transported in sections to the liner's berth where it will be re-assembled and fitted on to the ship.

Other tests which have been carried out include those to determine the design and form of the liner, in the wind tunnel experiments, and over four thousand experimental runs carried out in the experimental wind tunnel experiments in which models of 30 funnels were used.

The design of the funnels is the work of the great funnels and to make sure that the decks and ventilators of the liner will be kept clear of the gas and the experiment made to ascertain the exact position of the funnels of the hawsepipes. For the latter purpose, shipbuilders have made a wooden replica of the immense bow of Number 354 and another model of the anchors a series of tests have been made, and the action being finally achieved.

In the series of testing being carried out for testing purposes, everything that goes into a steamship is being tested. The model is made in such a way that it will be a true replica of the actual ship.
